STEP 6

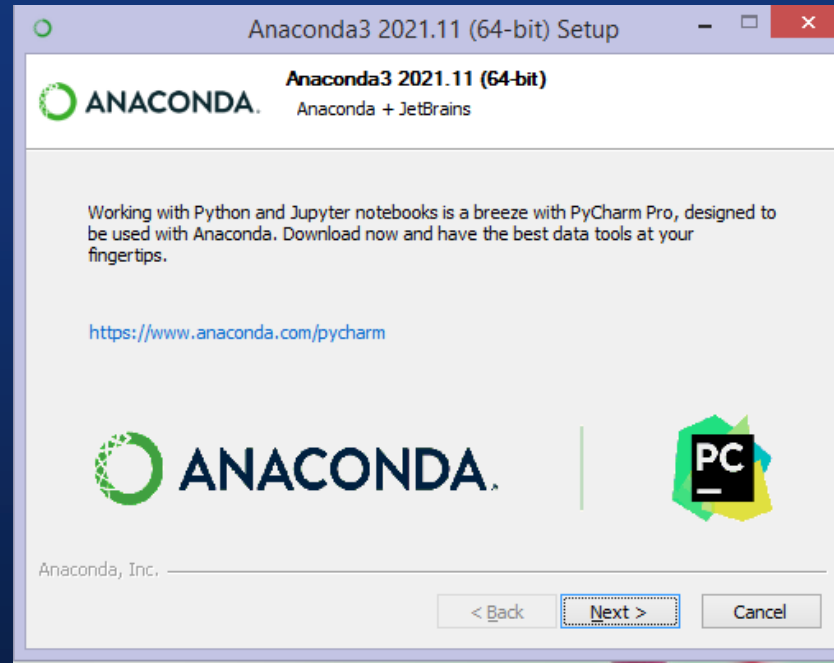

Advanced Option ceklis keduanya lalu klik instal

STEP 7

Tunggu sampai penginstalan selesai (15-25 menit) lalu klik next

STEP 8

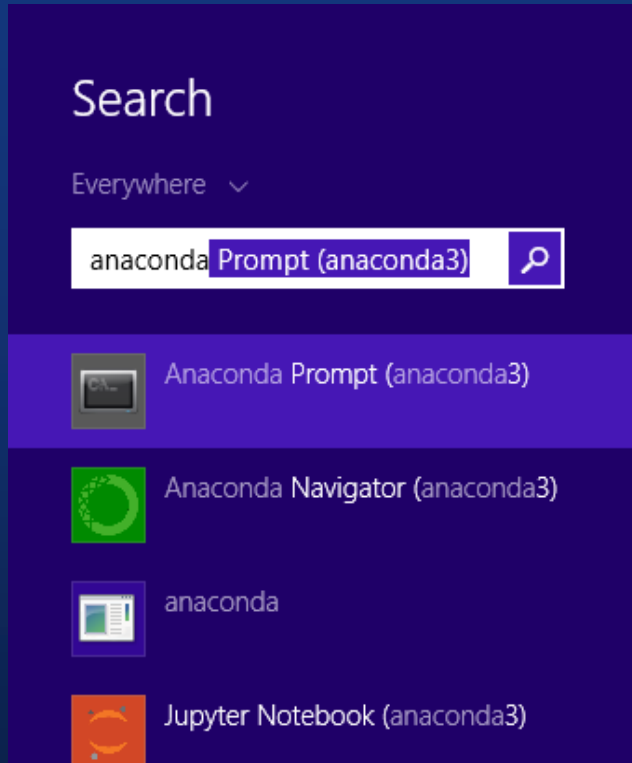

Setelah muncul seperti ini berarti penginstalan sudah selesai lalu klik next

STEP 9

Lalu klik Finish dan aplikasi Anaconda sudah terinstal dan siap untuk digunakan

```
(base) C:\Users\User>conda --version
conda 4.10.3

(base) C:\Users\User>python --U
unknown option --U
usage: python [option] ... [-c cmd | -m mod | file | -l [arg] ...]
Try 'python -h' for more information.

(base) C:\Users\User>conda --U
usage: conda-script.py [-h] [-U] command ...
conda-script.py: error: the following arguments are required: command

(base) C:\Users\User>pyhton -U
'pyhton' is not recognized as an internal or external command,
operable program or batch file.

(base) C:\Users\User>
```

Untuk mencoba mengcoding buka “Anaconda Prompt”
